$\{1,2,3,4\}$  and  $B = \{Red, Blue, Green, Black\}$  In set A, there are four elements and in set B also there are four elements. Therefore, set A and set B are equivalent. Equal sets

The two sets A and B are said to be equal if they have exactly the same elements, the order of elements do not matter. Example:  $A =$

dynamic objects devised for algebraic and graphic description of realistic tasks. They constitute a formal system providing means to specify or implement (depending on degree of description generality) the tasks. They can be transformed, thus come under simplification, in accordance with rules-axioms of their algebra.

Also, their properties can be inferred from the axioms. One objective of this book is presentation, by many realistic examples, of computing capability of c-e structures, without entering into mathematical details of their algebra. In particular, how computing with natural numbers and in
