A dynamic new story about how babies make their way in the world—and how grown-ups have tried to make sense of these tiny inscrutable beings. As a new parent, Nicholas Day had some basic but confounding questions: Why does my son find the straitjacket of his swaddling blanket comforting and not terrifying? How can he never meet a developmental norm and still be OK? And when will he stop sucking my finger? So he went digging for answers. They were not what he expected. Drawing on a wealth of perspectives—scientific, historical, cross-cultural, personal—Baby Meets World is organized around the mundane activities that dominate the life of an infant: sucking, smiling, touching, toddling. From these everyday activities, Day weaves together an account that is anything but ordinary: a fresh, surprising story, both weird and wondrous, about our first experience of the world. Part hidden history of parenthood, part secret lives of babies, Baby Meets World steps back from the moment-to-moment chaos of babydom. It allows readers to see infancy anew in all its strangeness and splendor.

Touch in Child Counseling and Play Therapy explores the professional and legal boundaries around physical contact in therapy and offers best-practice guidelines from a variety of perspectives. Chapters address issues around appropriate and sensitive therapist-initiated touch, therapeutic approaches that use touch as an intervention in child treatment, and both positive and challenging forms of touch that are initiated by children. In these pages, professionals and students alike will find valuable information on ways to address potential ethical dilemmas, including defining boundaries, working with parents and guardians, documentation, consent forms, cultural considerations, countertransference, and much more.

New mothers face a barrage of confounding decisions during the life-cycle of early motherhood which includes... Should they change their diet or mindset to conceive? Exercise while pregnant? Should they opt for a home birth or head for a hospital? Whatever they "choose," they will be sure to find plenty of medical expertise from health practitioners to social media "influencers" telling them that they're making a series of mistakes. As intersectional feminists with two small children each, Bethany L. Johnson and Margaret M. Quinlan draw from their own experiences as well as stories from a range of caretakers throughout. *You're Doing it Wrong!* investigates the storied history of mothering advice in the media, from the newspapers, magazines, doctors' records and personal papers of the nineteenth-century to today's websites, Facebook groups, and Instagram feeds. Johnson and Quinlan find surprising parallels between today's mothering experts and their Victorian counterparts, but they also explore how social media has placed unprecedented pressures on new mothers, even while it may function as social support for some. They further examine the contentious construction of prenatal and baby care expertise itself, as individuals such as everyone from medical professionals to experienced moms have competed to have their expertise acknowledged in the public sphere. Exploring potential health crises from infertility treatments to "better babies" milestones, *You're Doing it Wrong!* provides a provocative look at historical and contemporary medical expertise during conception, pregnancy, childbirth, postpartum, and infant care stages.

The definitive work on a groundbreaking study, this essential volume provides a coherent picture of the complexity of development from birth to adulthood. Explicated are both the methodology of the Minnesota study and its far-reaching contributions to understanding how we become who we are. The book marshals a vast body of data on the ways in which individuals' strengths and vulnerabilities are shaped by myriad influences, including early experiences, family and peer relationships throughout childhood and adolescence, variations in child characteristics and abilities, and socioeconomic conditions. Implications for clinical intervention and prevention are also addressed. Rigorously documented and clearly presented, the study's findings elucidate the twists and turns of individual pathways, illustrating as never before the ongoing interplay between developing children and their environments.

Rhyming text introduces baby animals, including baby rabbits, puppies, ducklings, lambs, and tiger cubs. On board pages.

Visually stunning. "School Library Journal, "starred review When it comes to wild animals, everyone knows that there are certain things you just don't do. It's clearly a bad idea to tease a tiger, pull a python's tail, or bother a black widow spider. But do you know how dangerous it can be to pet a platypus, collect a cone shell, or touch a tang fish? Some creatures have developed unusual ways of protecting themselves or catching prey, which can make them unexpectedly hazardous to your health. In this dynamic and fascinating picture book by Steve Jenkins, you'll find out what you should "never" do if you encounter one of these surprisingly dangerous animals."
