Test developers need to provide a clear explication of the language ability constructs that underpin the tests they offer in the public domain; such an explication is essential for supporting claims about the validity --- or usefulness --- of tests and test scores. This edited volume develops a theoretical framework for validating tests of second language speaking ability. The framework is then applied through an examination of the tasks in Cambridge ESOL speaking tests from a number of different validity perspectives that reflect the socio-cognitive nature of any assessment event. The chapter authors show how an understanding and analysis of the framework and its components can assist test developers to operationalise their tests more effectively, especially in relation to the key criteria that

differentiate one proficiency level from another. The volume is a rich source of information on all aspects of examining speaking ability. As such, it will be of considerable interest to examination boards who wish to validate their own speaking tests in a systematic and coherent manner, as well as to academic researchers and graduate students in the field of language assessment more generally. This is a companion volume to the previously published titles Examining Writing and Examining Reading.

This series of three books provides practice tests for the revised Business English Certificate exams at Preliminary, Vantage and Higher levels. The exams are available in 60 countries worldwide, and reflect the ALTE (Association of Language

Testers in Europe) level system. They cover the four language skills of Reading, Writing, Listening and Speaking, and with the revisions now incorporate certain features of the CEIBT exams, and reflect developments in other exams such as PET, FCE and CAE. Each book contains four complete Practice Tests. Two editions are available, with or without answers. The With Answers editions include sample written answers which are assessed in detail, with errors corrected, good points highlighted, and marks given.

This volume brings together empirical research that explores interaction in a wide range of educational settings. It includes work that takes a cognitive, brain-based approach to studying interaction, as well as studies that

take a social, contextual perspective. Interaction is defined quite broadly, with many chapters focusing on oral interaction as is typical in the field, while other chapters report work that involves interaction between learners and technology. Several studies describe the linguistic and discourse features of interaction between learners and their interlocutors, but others demonstrate how interaction can serve other purposes, such as to inform placement decisions. The chapters in the book collectively illustrate the diversity of contemporary approaches to interaction research, investigating interactions with different interlocutors ( learner-learner, learner-teacher), in a variety of environments (classrooms, interactive testing environments, conversation groups)

and through different modalities (oral and written, face-to-face and technology-mediated).
