The main limitation with Timetable Management System is that it is not linking to the current student database. This is because if the system connects to the current database the requirement for the hardware and software is higher. Besides that, another limitation is that the FCSIT must have a permanent administrator to maintain the database in the system.

The study looks closely at how academic libraries present themselves in the course management system, and the role that they play in developing it and training faculty and students to use it. The report gives detailed data on library staff time devoted to the course management system, the role the library plays in information literacy regarding the course management system, the degree to which libraries offer courses through the CMS, and the degree to which library resources such as course reserves, LibGuides and other subject and course guides, inter-library loan requests, and other library services are integrated into the CMS. Data is broken out by size and type of academic library and for different CMS systems.

The Survey of College Website Management Practices, a 171-page study, presents more than 500 tables of data about college websites, and is based on data from 68 North American colleges. The study presents detailed data on budgets, software preferences, editorial control, staff size and composition, use of consultants, plans for website redesign, and a broad range of other issues confronting college web site staffs. The report helps to answer questions such as: what kind of disaster management and campus crisis policies do college web staffs have in place. How do staffs track end users, and how many visitors are different college web sites attracting? Which college departments are most influential in managing and directing the website? Does the web staff consider itself in charge of content, IT questions or both? How many individuals can enter content to the site without the permission of the webmaster? What role do social

networking sites play in the college web staff's future plans? How often does the webmaster review departmental sites and how much control does he/she have over them? How often are major website revisions planned and how are the best results for end user "buy-in" achieved?

This report looks closely at how academic libraries are re-shaping their websites. The study is based on a survey of 56 academic library web staffs with data broken out by size and type of academic institution and other criteria. The 160 page study gives exhaustive data about academic library preferences in areas such as use of mashups, library social media sites, website staff and budgets, role of the college and library IT staffs, governance of the website, content entry policies, relations with the college IT and web staff, branding issues, college web conformity issues, preferences in content management systems, programming and scripting, division of web staff time among various priorities, use of blogs, listservs, email newsletters, rss feeds and other communication vehicles, use of and plans for federated search, search box presentation strategy, and use of cascading style sheets. The study also covers ease of use issues for library staff focusing on how easy it is to perform certain website-related tasks such as entry of the same content to multiple site locations, ease of inserting and positioning videos, and ease of inserting tabular materials, among other tasks. Other issues covered include but are not limited to: use of freelancers and consultants, sources of advice, use of social bookmarking tools and much more.

For many schools in today's economy, money is tight, and costs must be closely monitored. With this in mind, there is one area where educators can save: free, open source software. In *Energize Education through Open Source*, Christopher D. Whittum explains the ins and outs of a huge repository of educational and productivity software that is available and open source. Filled with practical examples, this guide shares how this software and hardware can be obtained, provides suggestions for integrating it, and shows how schools can find the options that work best for their students and teachers. Whittum, who has worked with computers for more than thirty years, addresses and explains the Linux operating system, discusses how the open source products can be integrated into existing curricula, and provides suggestions for applications that could serve as aids to learning. *Energize Education Through Open Source* provides a feasible technology solution for schools facing financial barriers.

This two-volume set (CCIS 873 and CCIS 874) constitutes the thoroughly refereed proceedings of the 9th International Symposium, ISICA 2017, held in Guangzhou, China, in November 2017. The 101 full papers presented in both volumes were carefully reviewed and selected from 181 submissions. This second volume is organized in topical sections on swarm intelligence: cooperative Search, swarm

optimization; complex systems modeling: system dynamic, multimedia simulation; intelligent information systems: information retrieval, e-commerce platforms; artificial intelligence and robotics: query optimization, intelligent engineering; virtualization: motion-based tracking, image recognition.

The book is intended to provide an insight into the DBMS concepts. An effort has been made to familiarize the readers with the concepts of database normalization, concurrency control, deadlock handling and recovery etc., which are extremely vital for a clear understanding of DBMS. To familiarize the readers with the equivalence amongst Relational Algebra, Tuple Relational Calculus, and SQL, a large number of equivalent queries have been provided. The concepts of normalization have been elaborated very systematically by fully covering the underlying concepts of functional dependencies, multi-valued dependencies, join dependencies, loss-less-join decomposition, dependency-preserving decomposition etc. It is hoped that with the help of the information provided in the text, a reader will be able to design a flawless database. Also, the concepts of serializabilty, concurrency control, deadlock handling and log-based recovery have been covered in full detail. An overview has also been provided of the issues related to distributed-databases.

ISO 9001:2015 quality management system has become part of the requirement of all the organizations, small to large, service as well as manufacturing. Over the years, ISO 9001 QMS has evolved, as per the organizations requirement, and has become very important for improving organizations systems and processes in order to sustain competitive advantages. This book focuses on requirements and key features of ISO 9001:2015 QMS such as risk based thinking, PDCA approach, process management, and continual improvement. The readers would find it easier to understand the standard requirements and implement these in their work place. Salient features: 1. Each clause and sub clause is illustrated through block diagram for easy understanding 2. Numerous examples, case examples and case studies from different organizations both from service and manufacturing for the benefit of the readers 3. Standard requirements expressed through process approach, PDCA cycle and What-How questions 4. Pedagogical tools such as chapter objectives, audit questions, flow diagrams, learning assessments and multiple choice questions have been used. 5. Special focus on risk based thinking and documented information provided. 6. Management discussions to illustrate the clause requirements are included for better understanding and readability. The forms and formats, key performance indicators/objectives, standard operating procedures and audit requirements are included.

Bachelor Thesis from the year 2020 in the subject Computer Science - Software, grade: 87.2, , language: English, abstract: This final year

project is the central part of the educational administration system for Nanjing University of Information Science and Technology (NUIST), which allows students to select courses and gives students access to course offerings via online as well as the ability to complete various administrative functions allowing for a better management of curriculum decisions in the context of academic objectives. The objective of these systems is to make this process more convenient and easier to achieve which has been met with varying levels of success. This Course Selection Portal will be operated by three users, the administrator, students and lecturers. This system will be developed using PHP, MySQL, jQuery, HTML, JavaScript, CSS and Bootstrap. The front-end is designed using PHP with excerpts of code written using jQuery, HTML, JavaScript, CSS and Bootstrap. The back-end is designed and managed through MySQL using a software called WAMP Server. This system software is more secured, user-friendly and less time-consuming.

This two-volume set, CCIS 0269-CCIS 0270, constitutes the refereed post-conference proceedings of the International Conference on Global Trends in Computing and Communication, ObCom 2011, held in Vellore, India, in December 2011. The 173 full papers presented together with a keynote paper and invited papers were carefully reviewed and selected from 842 submissions. The conference addresses all current issues associated with computing, communication and information. The proceedings consists of invited papers dealing with the review of performance models of computer and communication systems and contributed papers that feature topics such as networking, cloud computing, fuzzy logic, mobile communication, image processing, navigation systems, biometrics and Web services covering literally all the vital areas of the computing domains.
