The Toshiba Aquilion One is a 640-slice CT scanner with 320 x 0.5 mm detector rows giving z-axis coverage of 160 mm. This specification allows the imaging of whole organs in a single non-helical rotation, for example an image of the heart can be captured within a single heart beat. In addition to reducing

Prime (160-slice) and the Toshiba Aquilion One (320-slice), which we describe below. They belong to the latest generation of CT scanners and are much more expensive than the previously mentioned machines. You would mostly find them in cardiac or research institutions.

Toshiba Aquilion Series (Which One to Get) - LBN Medical
The advancement of CT technology has traveled largely predictable paths over the last two decades; from single-slice, to dual, to 4, 8, and 16-slice, doubling slice counts every few years into the current stratosphere of 320 or 640 slices per rotation.

A high-slice scanner also is not a cure-all for CT artifacts. He explained beam-hardening and some motion artifacts will still be seen with a 256- or 320-slice system. Stress Testing on CT Min said the higher-slice systems may offer an advantage in perfusion imaging over 64-slice, because of their ability to image the entire heart at once.

Costs vs. Benefits: Comparing 64-Slice to 256-, 320-Slice ...
64-slice CT — Ideal in the world of cardiac, trauma, or high-volume critical care environments where time is of the essence. 128-slice CT — Commonly found in cardiac or research institutions. Scanners with this power, as well as 256- or 320-slice scanners, can scan the whole body in seconds and provide incredibly sharp 3D images of any organ.

This book describes the different aspects of aortic valve and root diseases including comprehensive discussion of the state-of-the-art diagnostic imaging options, disease risk stratification, selection of candidates for valve repair or percutaneous intervention, and most recent therapeutic options. The growing prevalence of valvular heart disease represents a major challenge in terms of short- and long-term management and surveillance. Aortic valve diseases, including aortic stenosis and regurgitation, are among the most frequent of these, while the number of cases of aortic root disease is also on the rise. Aortic valve disease treatment options include valve surgery, valve repair, minimally invasive valve surgery, and percutaneous approaches and all are covered in this volume. *Treatments for Aortic Valve and Root Diseases* is a highly illustrated, case oriented reference aimed at cardiology fellows in training, while also helpful to surgeons, cardiologists, imagers, interventionalists, as well as other clinicians and students involved in the diagnosis and treatment of aortic valve and root diseases.

at the distributed virtual Program Committee meeting. Each paper's review recommendations were carefully checked for consistency; in many instances, the Vice Chairs read the papers themselves when the reviews did not seem sufficient to make a decision. Throughout the reviewing process, I

received a tremendous amount of help and advice from General Co-chair Manish Parashar, Steering Chair Viktor Prasanna, and last year's Program Chair Srinivas Aluru; I am very grateful to them. My thanks also go to the Publications Chair Sushil Prasad for his outstanding efforts in putting the proceedings together. Finally, I thank all the authors for their contributions to a hi- quality technical program. I wish all the attendees a very enjoyable and informative meeting.

December 2008 P. Sadayappan Message from the General Co-chairs and the Vice General Co-chairs On behalf of the organizers of the 15th International Conference on High-Performance Computing (HiPC), it is our pleasure to present these proceedings and we hope you will find them exciting and rewarding. The HiPC call for papers, once again, received an overwhelming response, attracting 317 submissions from 27 countries. P. Sadayappan, the Program Chair, and the Program Committee worked with remarkable dedication to put together an outstanding technical program consisting of the 46 papers that appear in these proceedings.

ICRP Publication 26 summarized the recommended basic system of dose limitation into three interrelated components, abbreviated as: (i) The justification of the practice. (ii) The optimization of radiation protection. (iii) The limits of the individual dose equivalent. This report is concerned primarily with the second of these components of the system of dose limitation, the optimization of radiation protection, and with the rationale and techniques to establish what is reasonably

achievable in the control of radiation exposures. A wide range of techniques is available to optimize radiation protection. Some of these techniques are drawn from operational research, some from economics and some from engineering. The use of a given technique implies, explicitly or implicitly, value judgements about the possible objectives of optimization. Techniques for use in the optimization of radiation protection include, but are not confined to, the procedures based on cost-benefit analysis and it is these procedures that are discussed in detail in this report. It is important to recognize that other techniques, some quantitative, some more qualitative, may also be used in the optimization of radiation protection.

CT scan and MRI are both informative but yet expensive imaging procedures. The patient's experience before, during and after these highly technological imaging procedures are thus unique and diverse in content. Different levels of claustrophobic and anxiety related reactions may be associated with these sophisticated procedures but though inevitable, patients at risk can be identified and managed so as to prevent any mishap and thus achieve the fullest benefit of these advanced imaging modalities. Putting in place measures that would ensure maximum co-operation from patients is therefore paramount to the role of MRI and CT imaging procedures in quality healthcare delivery. A Portfolio of evidence is therefore necessary in enabling the synthesis of enough evidence from the work of others on the same subject matter. With this evidence-led approach, the Portfolio critically evaluates the subject matter in light of current knowledge, personal experiences, and clinical practices, thus providing a deeper interrogation of evidences for a better understanding of the subject matter.
