This book develops conceptual understanding of the fundamentals of financial accounting which play a crucial role in laying the foundation of commerce and accountancy courses in general and CPT in particular. Dexterously organized to suit the requirements of CPT aspirants, the text presents a step by step analysis of the basic concepts of accountancy in a comprehensive but in an easy-to-grasp manner. The text begins with discussing the meaning and scope of

accounting and moves on by elaborating on different accounting standards, policies and the procedures followed in accounting. It also discusses ledger, trial balance, cash book and bills of exchange or promissory notes in the subsequent chapters. Apart from discussing the various types of accounts, such as partnership accounts and company accounts, this text explains debentures and inventories in a simple and lucid style. Specifically meant for the prospective examinees of the Common Proficiency Test (CPT), conducted by the Institute of Chartered Accountants of India (ICAI), this text should also prove valuable to undergraduate students of commerce and management. **SALIENT FEATURES** Provides bird's eye view in each chapter for a quick understanding of the concept Includes keywords and summary at the end of each chapter Incorporates Multiple Choice Questions with their answers useful for CPT Provides model test papers, objective type questions and subject in nutshell in Appendices.

This book studies the dynamics of political discourse in governance processes. It demonstrates the process in which political discourses become normative mechanisms, first marking socially constructed realities in politics, second playing a role in delineating the subsequent policy frames, and third influencing the public sphere.

In many jurisdictions today, life imprisonment is the most severe penalty that can be imposed. Despite this, it is a relatively under-researched form of punishment and no meaningful attempt has been made to understand its full human rights implications. This important collection fills that gap by addressing these two key questions: what is life imprisonment and what human rights are relevant to it? These questions are explored from the perspective of a range of jurisdictions, in essays that draw on both empirical and doctrinal research. Under the editorship of two leading scholars in the field, this innovative and important work will be a landmark publication in the field of penal studies and human rights.

This book is specially designed for the students appearing in CPT (Common Proficiency Test) Examination of ICAI. It has been written strictly in accordance with the Latest Syllabus prescribed by ICAI.

ICM 2010 proceedings comprises a four-volume set containing articles based on plenary lectures and invited section lectures, the Abel and Noether lectures, as well as contributions based on lectures delivered by the recipients of the Fields Medal, the Nevanlinna, and Chern Prizes. The first volume will also contain the speeches at the opening and closing ceremonies and other highlights of the Congress.

The theory and applications of intelligent systems is today an important field of research. This book is an up-to-date collection of seventeen chapters, written by recognized experts in the field. In an introductory mathematical foundations part an overview of generalizations of the integral inequalities for nonadditive integrals and a construction of the General Prioritized Fuzzy Satisfaction Problem is given. Then different aspects of robotics are presented, such as the differences between human beings and robots, the motion of bipedal humanoid robots, and an evaluation of different autonomous quadrotor flight controllers. Also Fuzzy Systems are presented by a model of basic planar imprecise geometric objects allowing various applications in image analysis, GIS, and robotics, as well as a type-2 fuzzy logic in a software library for developing perceptual computers, and a two-degree-of-freedom speed control solutions for a brushless Direct Current motor. The book also presents recent applications in medicine such as a Virtual Doctor System, methods for a face to face human machine interaction, and an emotion estimation, with applications for multiple diseases and the effect of the applied therapy. The last part of the book covers different applications in transportation, network

monitoring, and localization of pedestrians in images.

Executive function refers to the goal-oriented regulation of one's own thoughts, actions, and emotions. Its importance is attested by its contribution to the development of other cognitive skills (e.g., theory of mind), social abilities (e.g., peer interactions), and academic achievement (e.g., mathematics), and by the consequences of deficits in executive function (which are observed in wide range of developmental disorders, such as attention-deficit hyperactivity disorder and autism). Over the last decade, there have been growing interest in the development of executive function, and an expanding body of research has shown that executive function develops rapidly during the preschool years, with adult-level performance being achieved during adolescence or later. This recent work, together with experimental research showing the effects of interventions targeting executive function, has yielded important insights into the neurocognitive processes underlying executive function. Given the complexity of the construct of executive function, however, and the multiplicity of underlying processes, there are often inconsistencies in the way that executive function is defined and studied. This inconsistency has hampered communication among researchers from various fields. This Research Topic is intended to bridge this gap and provide an opportunity for researchers from different perspectives to discuss recent advances in understanding childhood executive function. Researchers using various methods, including, behavioral experiments, neuroimaging, eye-tracking, computer simulation, observational methods, and questionnaires, are encouraged to contribute original empirical research. In addition to original empirical articles, theoretical reviews and opinions/perspective articles on promising future directions are welcome. We hope that researchers from different areas, such as developmental psychology, educational psychology, experimental psychology, neuropsychology, neuroscience, psychiatry, computational science,

etc., will be represented in the Research Topic.

Ever since its discovery eighty-five years ago, quantum theory has been used to study the physical universe with great profit, both intellectual and financial. Over the last fifty years, however, we have found out more and more about the theory itself, and what it tells us about the universe. It seems we may have to accept non-locality - cause and effect may be light-years apart; loss of realism - nature may be fundamentally probabilistic; and non-determinism - it seems that God does play dice! This book, written by an expert in the field, explains the emergence of our new perspective on quantum theory, but also describes how the ideas involved in this re-evaluation led seamlessly to a totally new discipline - quantum information theory. This discipline includes quantum computation, which is able to perform tasks quite out of the range of other computers; the totally secure algorithms of quantum cryptography; and quantum teleportation - as part of science fact rather than science fiction. The book is the first to combine these elements, and will be of interest to anybody interested in fundamental aspects of science and their application to the real world.
