The text is presented in chunks of approximately 10 True/False questions on specific concepts in research methodology and statistics. This is followed by clear explanations, from first principles, that assume no prior knowledge. This book is for the paper critique section of the MRCPsych 2 examination but clinical tutors, organisers of journal clubs and clinicians interested in research will find the book helpful. It is particularly invaluable for clinicians interested in evidence based medicine. This book is intended to be used as an aide memoir, carried in the pocket and referred to as often as necessary. It enables self-assessment to be carried out in the hope that any gaps in knowledge will be identified. Much of this book focuses on practical application of statistical and research methodology concepts into critical paper reading. The reader is encouraged to attempt the questions before the reading the suggested answers.

Given the explosion of information and knowledge in the field of Life Sciences, adapting primary literature as materials in course work as part of active learning seems to be more effective in improving scientific literacy among science undergraduates than the pure transmission of content knowledge using traditional textbooks. In addition, students also read research articles as part of undertaking laboratory research projects useful for preparing them for graduate school. As such, a good grasp of reading and analytical skills is needed for students to understand how their research project contributes to the field that they are working in. Such skills are being taught at UK and USA universities. In Asia, this approach in teaching has not yet been as widespread, although similar ideas are beginning to be used in education. Written as a quick guide for undergraduate students and faculty members dealing with scientific research articles as part of a module or research project, this book will be useful, especially in Asia, for students and faculty members as the universities look to incorporating the use of scientific research articles in their undergraduate teaching. For Life Science students, the first time they encounter a primary literature can be rather daunting, though with proper guidance, they can overcome the initial difficulties and become confident in dealing with scientific articles. This guidebook provides a structured approach to reading a research article, guiding the reader step-by-step through each section, with tips on how to look out for key points and how to evaluate each section. Overall, by helping undergraduate students to overcome their anxieties in reading scientific literature, the book will enable the students to appreciate better the process of scientific investigations and how knowledge is derived in science.

A Feminist Critique of Police Stops examines the parallels between stop-and-frisk policing and sexual harassment. Law professor Josephine Ross trained teenagers to protect their rights only to discover that our constitutional rights are a mirage. In reality, we can't say no when police seek to question or search us. Building on feminist principles, Ross demonstrates why the Supreme Court got it wrong when it allowed police to stop, search and sometimes strip-search people and call it consent. Using a wide range of sources - including her law students' experiences with police, news stories about Eric Garner and Sandra Bland, social science and the work of James Baldwin - Ross sheds new light on how police use stop-and-frisk to threaten and marginalize vulnerable communities. This book should be read by everyone interested in how Court-approved police stops sap everyone's constitutional rights and how this form of policing can be eliminated.

This volume interrogates settled ways of thinking about the seemingly ineliminable conflict between religious and secular values in our world today. What are the assumptions and resources internal to secular conceptions of critique that help or hinder our understanding of one of the most pressing conflicts of our times? Taking as their point of departure the question of whether critique belongs exclusively to forms of liberal democracy that define themselves in opposition to religion, these authors consider the case of the " Danish cartoon controversy " of 2005. They offer accounts of reading, understanding, and critique for offering a way to rethink conventional oppositions between free speech and religious belief, judgment and violence, reason and prejudice, rationality and embodied life. The book, first published in 2009, has been updated for the present edition with a new Preface by the authors.

Carl Friedrich Kiemeyer (1765-1844) was the 'father of philosophy of nature' owing to his profound influence on German Idealist and Romantic Naturphilosophie. With the recent growth of interest in Idealist and Romantic philosophy of nature in the UK and abroad, the importance of Kiemeyer's work is being increasingly recognised and special attention is being paid to his influence on biology's development as a distinct discipline at the end of the eighteenth century. In this exciting new book, Lydia Azadpour and Daniel Whistler present the first ever English translations of key texts by Kiemeyer, along with contextual and interpretative essays by leading international scholars, who are experts on the philosophy of nature and the formation of the life sciences in the late eighteenth century. The topics they cover include: the laws of nature, the concept of force, the meaning of 'organism', the logic of recapitulation, Kiemeyer and ecology, sexual differentiation in animal life and Kiemeyer's relationship to Kant, Schelling and Hegel. In doing so, they provide a comprehensive English reference to Kiemeyer's historical and contemporary significance.
