lessons. This

lesson is looking into the future and delving into what

Excel is becoming:

a powerhouse for data analysis.

Power Query is the first step in

analyzing data,

Read Online

Excel Excel

before you do any substantial analysis, you need to get the data into Excel. Not only get data into Excel but probably clean it up. Parse columns, join columns, remove errors, you know, that kind of stuff. Of course, you can add a column with formulas to do this.

That will work for

100 or 1,000 rows
of data. What about

250,000, 700,000

or even 1,000,000

rows? Excel really
slows down with
that many

calculations. Power

Query solves this.

It shapes the data
