Shop Management Frederick Winslow Taylor The most severe trial to which any system can be subjected is that of a business which is in keen competition over a large territory, and in which the labor cost of production forms a large element of the expense, and it is in such establishments that one would naturally expect to find the best type of management. We are delighted to publish this classic book as part of our extensive Classic Library collection. Many of the books in our collection have been out of print for decades, and therefore have not been accessible to the general public. The aim of our publishing

program is to facilitate rapid access to this vast reservoir of literature, and our view is that this is a significant literary work, which deserves to be brought back into print after many decades. The contents of the vast majority of titles in the Classic Library have been scanned from the original works. To ensure a high quality product, each title has been meticulously hand curated by our staff. Our philosophy has been guided by a desire to provide the reader with a book that is as close as possible to ownership of the original work. We hope that you will enjoy this wonderful classic work, and that for you it becomes an enriching experience.

This volume comprises three works originally published separately as Shop Management (1903), The Principles of Scientific Management (1911) and Testimony Before the Special House Committee (1912). Taylor aimed at reducing conflict between managers and workers by using scientific thought to develop new principles and mechanisms of management. In contrast to ideas prevalent at the time, Taylor maintained that the workers' output could be increased by standardizing tasks and working conditions, with high pay for success and loss in case of failure. Scientific Management controversially suggested that almost every act of the worker would have to be preceded by one or more preparatory acts of management, thus separating the planning of an act from its execution.
