"Maternal Adjustment to Premature Birth: Utilizing the Roy ...

This article examines whether preterm newborns' behavior and their mother's adjustment to the premature birth and infant hospitalization have an influence on subsequent infant development and behavior, maternal adjustment, and mother-infant relationship. The behavioral competencies of 42 well, singleton preterm infants (mean gestational age=31 weeks) were assessed, as were their mothers' adjustment (depression and coping) and competencies (knowledge of child development).

Preterm behavior, maternal adjustment, and competencies in ...

The birth of a preterm infant has been linked with parental distress and adjustment difficulties, yet little is known about the psychosocial factors contributing to this association. Using a...

Maternal adjustment following preterm birth: Contributions ...

Confounders found to have the greatest impact were placenta praevia, hypertensive complications, and maternal medical history. Conclusion Even after adjustment for confounders, advanced maternal age (40 years and over) was associated with preterm birth. A maternal age of 30-34 years was associated with the lowest risk of prematurity.

Effect of maternal age on the risk of preterm birth: A ...

Maternal stress during pregnancy was more common among women who delivered preterm ($p < 0.000$) compared to the control group and was still evident after adjusting for premature contractions, tobacco use, previous preterm delivery and genital tract infection (Table 4). The difference also remained in the multiple logistic regressions with the same adjustment after excluding the 24 cases of twin pregnancies from the total study population.

Effect of maternal stress during pregnancy on the risk for ...

Findings to date suggest that maternal stress may be influenced by a range of factors spanning infant, maternal, and family social background characteristics. 2 These include the severity of infant illness, 1, 11 pregnancy planning and previous pregnancy loss, 1 maternal trait anxiety and mental health history, 11, 12 exposure to other stressful life events, 13 maternal education, 14 and ...

VERY PRETERM BIRTH: MATERNAL EXPERIENCES OF THE NEONATAL ...

After adjustment, associations with younger maternal age remained for low birthweight (odds ratio [OR] 1.18 (95% CI 1.02-1.36)), preterm birth (1.26 [1.03-1.53]), 2-year stunting (1.46 [1.25-1.70]), and failure to

complete secondary schooling (1.38 [1.18-1.62]) compared with mothers aged 20-24 years.

Association between maternal age at childbirth and child ...

After adjustment for parity, maternal age, BME group and index of multiple deprivation, postpartum mothers of very preterm babies were significantly more likely to suffer from anxiety at 10 days, fatigue and flash-backs at 3 months and at 3 months feel that their baby belonged to them only recently or not quite yet, and that their baby was more difficult than average.

Impact of preterm birth on maternal well-being and women's ...

Even after adjustment for confounders, advanced maternal age (40 years and over) was associated with preterm birth. A maternal age of 30-34 years was associated with the lowest risk of prematurity. Effect of maternal age on the risk of preterm birth: A large cohort study

Effect of maternal age on the risk of preterm birth: A ...

Adjustment for first trimester SBP and gestation length at the time of assessment did not attenuate the association between preterm birth and SBP (3.99 [0.82, 7.16] mmHg; Table 2 Model 2). Accounting for hypertensive disorders of pregnancy (Model 3)

Bookmark File PDF Maternal Adjustment To Premature Birth Utilizing The Roy

attenuated the estimate for SBP by approximately 30% to 2.78 (-0.30, 5.87) mmHg, while the estimate for HDL was only slightly attenuated (-6.67 [-12.13, -1.20] mg/dL).

Preterm birth and long-term maternal cardiovascular health

Variables included in the adjusted models were maternal age, history of previous preterm delivery, height, body mass index, marital status, parity, smoking, maternal education, household income, and total energy intake.

Maternal dietary patterns and preterm delivery: results ...

A natural log-unit increase in maternal preconception BPA (RR 1.94; 95% CI: 1.20, 3.14) and BPS (RR 2.42; 95% CI: 1.01, 5.77) concentration was associated with an increased risk of preterm birth. These associations remained after further adjustment for maternal prenatal and paternal preconception biomarker concentrations. Paternal preconception Σ Parabens concentrations showed a possible elevated risk of preterm birth (RR 1.36; 95% CI: 0.94, 1.96).

Maternal and paternal preconception exposure to phenols ...
