The traditional general mathematics market has been replaced in some schools with courses called “Tech Prep Math,” “Applied Mathematics,” or “Mathematics for Technology.” Schools that offer these courses generally want programs that integrate ideas from algebra, geometry, probability, statistics, and logic, and focus on real-world applications. As a three-year series, MathMatters covers all essential skills of first-year algebra and informal geometry. Book 3 includes some attention to formal geometry proof and most essential Algebra 2 skills. Although MathMatters consists of three books many schools may choose to use only one or two of the three books in the series. When this is the market, Books 1, 2, and 3 are viewed as “levels” and the school’s selection is determined by the book or books that best fit their needs The list of schools that require all students to complete algebra one is growing rapidly. Students who would be in a traditional general mathematics program often cannot handle the pace of a regular algebra one course. MathMatters, Books 1, 2, 3 offer a viable alternative. In fact, students completing this three-year sequence will have also covered the essential skills and concepts of geometry and much of the content of Algebra 2! Many states now require students to complete geometry as well as algebra one.

"The text is suitable for a typical introductory algebra course, and was developed to be used flexibly. While the breadth of topics may go beyond what an instructor would cover, the modular approach and the richness of content ensures that the book meets the needs of a variety of programs."--Page 1.

Based on the principles of the National Council of Teachers of Mathematics standards, this textbook and supporting teacher materials offer opportunities for students to explore mathematics through cooperative learning, to infer mathematical concepts through the use of manipulatives, to speak and write about mathematics with confidence, to make mathematical connections relating mathematical concepts to everyday life, and to critically examine problems and arrive at solutions.

Too often, students who fail a grade or a course receive remediation that ends up widening rather than closing achievement gaps. According to veteran classroom teacher and educational consultant Suzy Pepper Rollins, the true answer to supporting struggling students lies in acceleration. In *Learning in the Fast Lane*, she lays out a plan of action that teachers can use to immediately move underperforming students in the right direction and differentiate instruction for all learners—even those who excel
