Introduced in 1970, the PA-31P utilized a swept Navajo Chieftain fuselage. The big cabin was 50 inches wide by 50 inches tall, and Piper succeeded in selling almost 300 before the end of production in 1977. The P-Navajo was the heaviest airplane Piper had at the time, weighing in at a hefty 7800 pounds gross.

Identifies more than four hundred private, commercial, and military aircraft, and briefly describes the history and characteristics of each.

The book provides a data-driven approach to real-world crew resource management (CRM) applicable to commercial pilot performance. It addresses the shift to a systems-based resilience thinking that aims to understand how worker performance provides a buffer against failure. This book will be the first to bring these ideas together. Taking a competence-based approach offers a more coherent, relevant approach to CRM. The book presents relevant, real-world examples of the concepts and outlines a change in thinking around pilot performance and data interpretation that is overdue. Airlines, pilots and aviation industry professionals will benefit from the insights into organisational design and alternative approaches to training. FEATURES Approaches CRM from a competence-based perspective Uses a systems model to bring coherence to CRM Includes a chapter on using blended learning and virtual reality to deliver CRM Features research on work/life balance, morale, pilot fatigue and link to error Operationalises 'resilience engineering' in a crew context
