ABOUT THE BOOK If you're considering a marketing career in Asia, whether you're a student or have a few years of work experience, Procter & Gamble is probably at the top of your list. A Fortune 500 company, P&G is known for its billion dollar brands. So, you know all their brands and their countless TV ads. You might even know a few people who work there. But you also know that P&G can be very selective in its recruitment, especially when it comes to marketing: P&G's heart and soul. EXCERPT FROM THE BOOK What P&G looks for: Grades: If you're in the top 10-15% of your class, then you're in good shape. But don't take it for granted. A resume screener who is unfamiliar with your school's grading system might not understand how impressive a magna cum laude is. Include a phrase like "among the top 5% of students" to make it crystal clear. If your grades aren't so great, you can compensate by having standout extracurricular activities. Analytical ability: Show this with certain experiences. Have you interned in other companies? Have you won any major competitions (big bonus points if theyre sponsored by companies such as L'Oreal, Nestle, Kraft, or HSBC)? Have you been a teaching assistant? List those accomplishments and include the strongest ones in your resume. Leadership: P&G is very particular when it comes to leadership. After all, it's looking for future marketing directors and VPs. Leadership positions (e.g., president, director, councilor) in school organizations are the best bet, and the bigger the organization, the better. Make sure to highlight specific achievements. Don't just write that you were the Logistics Committee Head. Be specific and write, "Led the organization of Major Event X attended by 1,000 students" or "Led a team of 20 for the annual fundraiser." This provocative account of our obsession with neuroscience brilliantly illuminates what contemporary neuroscience and brain imaging can and cannot tell us about ourselves, providing a much-needed reminder about the many factors that make us who we are. What can't neuroscience tell us about ourselves? Since fMRI -- functional magnetic resonance imaging -- was introduced in the early 1990s, brain scans have been used to help politicians understand and manipulate voters, determine guilt in court cases, and make sense of everything from musical aptitude to romantic love. br In Brainwashed, psychiatrist and AEI scholar Sally Satel and psychologist Scott O. Lilienfeld reveal how many of the real-world applications of human neuroscience gloss over its limitations and intricacies, at times obscuring -- rather than clarifying -- the myriad factors that shape our behavior and identities. Brain scans, Satel and Lilienfeld show, are useful but often ambiguous representations of a highly complex system. Each region of the brain participates in a host of experiences and interacts with other regions, so seeing one area light up on an fMRI in response to a stimulus doesn't automatically indicate a particular sensation or capture the higher cognitive functions that come from those interactions. The narrow focus on the brain's physical processes also assumes that our subjective experiences can be explained away by biology alone. As Satel and Lilienfeld explain, this "neurocentric" view of the mind risks undermining our most deeply held ideas about selfhood, free will, and personal responsibility, putting us at risk of making harmful mistakes, whether in the courtroom, interrogation room, or addiction treatment clinic. Although brain scans and other neurotechnologies have provided groundbreaking insights into the workings of the human brain, Brainwashed shows readers that the increasingly fashionable idea that they are the most important means of answering the enduring mysteries of psychology is misguided -- and potentially dangerous.
