The story of the famed race to the Moon between the US and the USSR has been told countless times. The strategies of these two superpowers have often been paralleled in a way that highlights their fight for dominance and efforts to develop needed new technologies. This book will show how beneath these surface similarities, the two competing nations employed very different core tactics. It provides a new perspective of the history of the space race by analyzing that history through philately - that is, from the images on postage stamps, post cards, and letters in circulation at that time. Through this fascinating historical visual record, the author shows how the propaganda-heavy approach of the USSR eventually lost out to the more pragmatic approach of the United States.

Comprising papers by such distinguished scholars as John Headley Brooke, James R. Moore, Ronald Numbers, and George Marsden, this collection shows that questions of science have been central to evangelical history in the United States, as well as in Britain and Canada.

Resulting from the authors' deep research into these two pre-Shuttle astronaut groups, many intriguing and untold stories behind the selection process are revealed in the book. The often extraordinary backgrounds and personal ambitions of these skilled pilots, chosen to continue NASA's exploration and knowledge of the space frontier, are also examined. In April 1966 NASA selected 19 pilot astronauts whose training was specifically targeted to the Apollo lunar landing missions and the Earth-orbiting Skylab space station. Three years later, following the sudden cancellation of the USAF's highly classified Manned Orbiting Laboratory (MOL) project, seven military astronauts were also co-opted into NASA's space program. This book represents the final chapter by the authors in the story of American astronaut selections prior to the era of the Space Shuttle. Through personal interviews and original NASA documentation, readers will also gain a true insight into a remarkable age of space travel as it unfolded in the late 1960s, and the men who flew those historic missions.

PTL traces the lives of Jim and Tammy Faye Bakker, from humble beginnings to wealth, fame, and eventual disgrace after revelations of a sex scandal and massive financial mismanagement.

Over the past 35 years more than 100 individual astronauts and cosmonauts have performed nearly 200 EVAs, (spacewalks), either singularly or in teams in Earth orbit, deep space or on the Moon. In 'Walking in Space: Development of Space Walking Techniques' the author, Dave Shayler, shows how hardware and crew members are prepared for, protected and supported during every EVA. He demonstrates how past experiences have led to improved training techniques and how this, in turn, has provided many successes and future developments.

How do we know about the select band of astronauts who traveled to the Moon? How were they selected and what happened to them? This book shows how we know about the astronauts and their experiences from primary and other sources. It includes information on some historical detective work that has taken place, using documentary and oral evidence, that has enabled historians to piece together fascinating information about these unique space pioneers.

Thoroughly annotated entries are arranged by subject and indexed by author. Most titles are generally available in public or college libraries; the many NASA publications may be obtained from government depository libraries. Intended as a research guide for high school and college students. Annotation copyrighted by Book News, Inc., Portland, OR
