"Diving inside some of the deepest mysteries of the human mind with someone who has spent her life studying exactly that, Barbara K. Lipska's 'The Neuroscientist Who Lost Her Mind' describes the leading neuroscientist's own descent into madness — triggered by an aggressive cancer that spread to her brain, miraculously retreated just months later, and left Lipska not only with her memories intact, but with a whole lot more insight (and even more questions) into the human brain."
